

Interns and bachelor/master degree projects (m/f) in applied informatics as of now

Robotic start-Up in Munich

To introduce ourselves!

We are a rapid growing robotic start-up founded and situated in Munich.

We evolve majorly innovative hardware and solutions which will turn the logistics market upside down in the coming years.

Some examples of our product portfolio:

- Fully automated compact storages for the retail industry,
- Pick-and-place solutions for the logistics market,
- Shelf robotics for e-commerce

We are not looking for the perfect straight CV but people who work with their head and heart, full of passion and creativity. Two out of plenty great reasons to work with us are the loft atmosphere in our office in the heart of Munich and our young, dynamic and highly motivated team.

What about you?

- Currently studying applied informatics
- Already programming skills in C++ plus Python (ideally)
- Some knowledge in ROS and database systems as PostgreSQL
- You work easily with Linux (Ubuntu)
- A major advantage is knowledge of HTML5 / Django or GIT

What we are providing!

- Attractive and very fair salary (either on based on project basis or working hours)
- 100% start-up atmosphere (soft drinks, coffee and others for free, team breakfast)
- Team events on a regular basis
- Chance to participate in the evolution of a major software system
- Elevated responsibility for the project, freedom of design and action-taking
- Privilege to work in a start-up in a major city as Munich designing a relevant industry product
- Great opportunity to look inside the scenery of extremely modern robotics

You want to participate in the creation and development of this brilliant idea and leave your own fingerprints, learn and experience a lot and be part of an energetic and vibrant, always moving team?
